

Spektrum™ DX6e AirWare™ Change Log

2016-November-15

Version 1.01

Changes since release version 1.00.

New Features & Improvements

- Auto-Config is now on the first Telemetry menu, making it easier for people to configure their telemetry systems.
- Changed the default Multi-Rotor type from Aerial Photography to FPV Racer mode.
- It was not possible to force DSM2 or 22ms binding modes in the previous version. This has been corrected. (Non-EU only).

Corrections

- The DX6e no longer displays swash types that are not available.
- Telemetry doesn't show invalid data for signal strength any more.

Spektrum™ DX6e AirWare™ Change Log

Version 1.00

This is the initial release of the DX6e firmware. This version will turn off the registration reminder screen that will show during power-down and some power-up cycles.

Thank you for purchasing the Spektrum DX6e transmitter!
